**A method of producing rigid foamed plastics containing urethane groups**

**A b s t r a c t**

5 The description relates to production of rigid foamed plastics containing urethane groups, by use of a blowing-agent mixture containing 5 to 50 parts by weight of C<sub>3</sub> and/or C<sub>4</sub> alkanes and 50 to 95 parts by weight of cyclopentane. There is also a description of use of the thus-produced rigid foamed plastics as composite components or for foam filling of cavities in refrigerator construction.
